## Technical Note

# LIMCON v3 Update

(use of lower grade steel and bolt to BCA BC1:2008 requirements)

### A) Update LIMCON v3

1. Download limcon353e.zip
2. Open limcon353e.zip with program like WinZip.
3. Extract LIMCON3.EXE to \LIMCONPROGRAM folder
4. Extract *USER\_GRADES.TXT* and *USER\_BOLTS.TXT* to \LIMCONLIB folder

### B) About *USER\_GRADES.TXT*

There may up to 20 user grades defined in the file "USER\_GRADES.txt", which must be in the \Limcon\Lib folder.

Open the USER\_GRADES.EXE to view example containing file spec.

The user can edit this text file (MsEdit.exe may be used for this) and add data as required. The user may enter no more than 5 characters for a grade - Limcon adds an asterisk at the front so user grades are easily distinguished. User grades are only visible in pull-downs when USER\_GRADES.txt is present.

### C) About *USER\_BOLTS.TXT*

There may up to 10 user bolt categories defined in the file "USER\_BOLTS.txt", which must be in the \Limcon\Lib folder.

Open the USER\_BOLTS.TXT to view example containing file spec.

User bolt categories are also limited to 5 characters and Limcon adds an asterisk. User bolt categories are only visible in pull-downs when USER\_BOLTS.txt is present and the country is set to UK.

### General Note

If you use a program other than MsEdit to edit these files make sure they are saved as text files without any binary characters. Tab characters are not allowed.
